

## **ELECTRONIC TEST ENGINEER**

### **Company**

Our client is a French owned company specialized in the design and conceiving of taylor-made testing equipment, test fixtures, test benches and assembling production workstations for the electronic application industries such as automotive, energy, electric network, medical industries. We have 25 years of experience and strong technical backgrounds. The company needs to develop in China.

### **Job description**

Your responsibilities will be to conceive the test bench required by the customer's specifications. Among others, from the customer's specifications, you are in charge of identifying the relevant measurement apparatus, integrate them in the test bench, conceiving the mechanical interface and the electronic plugs, programing the software and proceeding to the troubleshooting. You follow the full project up to its end including the qualification and the installation at the customer's site.

As a project manager, you will be the privileged contact of the customer during all the duration of the project and manage the schedule, internal mechanical and logistics resources. You are also supporting the sales team for specific technical points.

### **Knowledge and Skills Required:**

The candidate is a specialist of electronics. He has a Master's graduate and benefits from a five year experience in functional testing manufacturing industry or electronic manufacturing industry. An experience combined with electro-mechanical design and software design will be appreciated. The candidate should be familiar with the most common design software, programming languages and test sequences (Labview, Labwindows, C, C++, TestStand, ATeasy...)

The candidate has good communication skills.

Fluency in Chinese and English is required. French skills will be an advantage.

Position based in Hong-Kong, Kwai Chung. Some trips to mainland China, Asia, and also France.
